MISSION 1: POLITICAL ESCORT

En route from Dantooine, a Rebel senator's fleet was ambushed by the Empire and nearly wiped out. The senator himself escaped in a shuttle, but a stray blast knocked out his ship's hyperdrive and sensors. Utterly reliant on his escort, the Rebel senator can do little more than go straight forward and hope he reaches the outskirts of a friendly system soon. Unfortunately, the Imperial fleet has already dispatched fighters to round up the survivors. Now, the Rebel escort must protect the senator until he can reach safety, but the Imperials won't make it easy for them...

Mission Setup

Rebel: Red Squadron Pilot

Imperial: Academy Pilot, Academy Pilot (use ID tokens to identify the two ships; see page 18)

The Rebel player places the senator's shuttle token within Range 1 of his edge of the play area. The shuttle must be placed in the exact center of his edge, with its artwork pointing directly toward the Imperial player's edge of the play area.

Place one unused Rebel Ship card **facedown** near the Rebel player's other Ship cards outside the play area (see "Shuttle Damage" below). Then he places his ship(s) within Range 2 of his edge of the play area.

Then the Imperial player places his ships within Range 2 of his edge of the play area.

Special Rules

- **Shuttle Stats:** Treat the senator's shuttle as a Rebel ship, which means that Rebel abilities that affect "friendly ships" may target the shuttle. It has an agility value of "2" and a hull value of "6," as shown on the token. (If playing with 100-point squads, it has a shield value of "6." Use tracking tokens to represent the shuttle's shields.)

- **Shuttle Movement:** At the start of each Activation phase, the Rebel player may move the senator's shuttle by choosing to execute one of three possible maneuvers: (↑ 2), (↖ 1), or (↗ 1). The senator's shuttle cannot perform actions or attack.

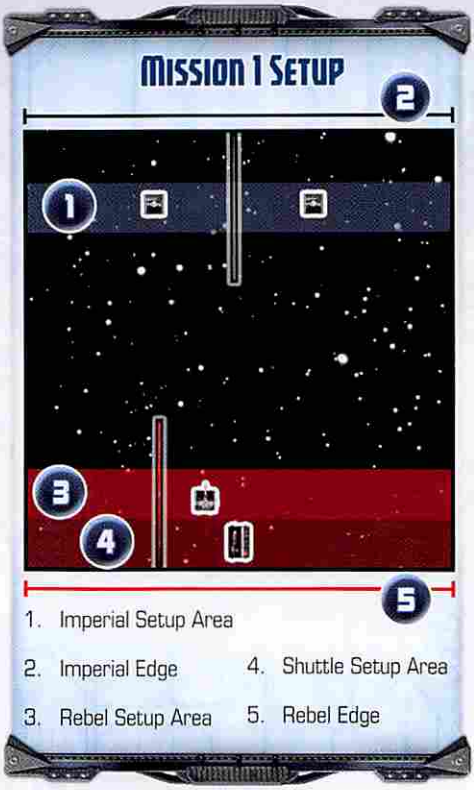

- **Shuttle Damage:** For each damage the shuttle suffers, place one Damage card facedown on top of the facedown Rebel Ship card (placed during setup). Change all ✲ results against the senator's shuttle to ✷ results (i.e., do not deal Damage cards faceup to the senator's shuttle).

Senator's Shuttle Token

Tracking Token

Protect Action: Rebel ships may perform a **PROTECT** action when within Range 1 of the senator's shuttle. When performing a **PROTECT** action, the Rebel player places one evade token on the senator's shuttle. When attacked, the senator's shuttle may spend its evade token to add one additional ✦ result to its defense roll (see "Spending an Evade Token" on page 12).

There is no limit to the number of evade tokens that may be on the senator's shuttle at once. The Rebel player may spend only one evade token during each attack. During the End phase, remove all evade tokens from the senator's shuttle.

- **Imperial Reinforcements:** During the End phase, the Imperial player may call for one **REINFORCEMENT** for each Imperial ship that was destroyed during that round. For each reinforcement, he takes one "Academy Pilot" Ship card and places it outside the play area. Then he places one "Academy Pilot" ship within Range 1 of **his edge** of the play area. The Imperial player can assign maneuvers to this ship and use it as normal.

Objectives

Rebel Victory: The senator's shuttle must flee off the Imperial player's edge of the play area (see "Fleeing the Battlefield" on page 17).

Imperial Victory: Destroy the senator's shuttle.

MISSION 2: ASTEROID RUN

While scouting the Outer Rim, Rebel ships came across a hidden Imperial outpost! Unfortunately, before they could contact the Rebellion, the Imperial facility's ion cannons fired a barrage, disabling the communications relay and hyperdrive engine on one of the Rebel ships. In desperation, the Rebels have fled to a nearby asteroid field while their astromechs attempt to repair the damaged systems. Hopelessly outnumbered, the disabled ship must survive until its systems are back online, and then must flee the battlefield in order to notify Rebel high command!

MISSION SETUP

Rebel: Luke Skywalker (Determination)

Imperial: "Night Beast," "Mauler Mithel" (Marksmanship)

The Imperial player places his ships within Range 1 of **either player's edge** of the play area. He is not required to place all of his ships on the same side of the play area.

Then the Rebel player places his ship(s) anywhere in the play area that is **not within** Range 1–3 of either the Imperial edge or the Rebel edge of the play area. He chooses one of his ships to be the **DISABLED SHIP** and inserts a tracking token into its base.

Then the Imperial player places the six asteroid tokens anywhere in the play area that is **not within** Range 1 of any Rebel ships **or** other asteroid tokens (see setup diagram for an example of a valid setup).

SPECIAL RULES

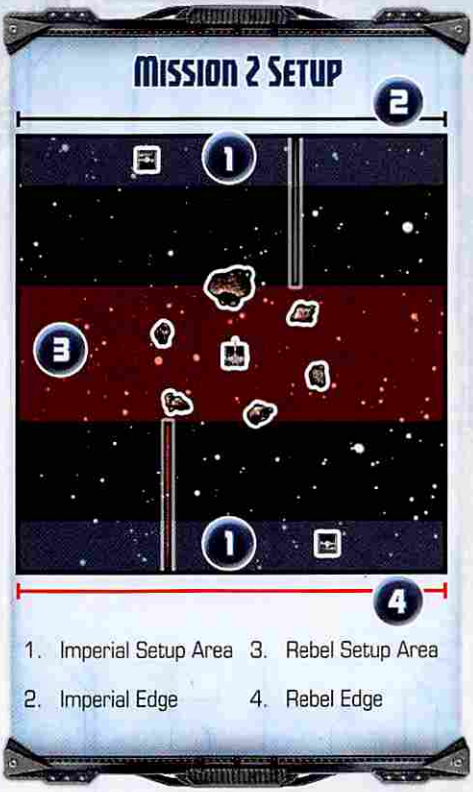

- **Tracking Rounds:** At the start of each Planning phase (including the first one), the Rebel player takes one tracking token from the supply and places it near his Ship cards outside the play area. The number of tracking tokens indicates the current round number (see "Objectives").

Tracking Token

- **Disabled Ship:** Until the disabled ship's systems are **REPAIRED**, it may be assigned only 1- or 2-speed maneuvers. At the start of Round 5, the disabled ship is repaired. The Rebel player may now assign this ship any maneuver available on its dial and may attempt to flee (see "Objectives").

- **Imperial Reinforcements:** During the End phase, the Imperial player may call for one **REINFORCEMENT** for each Imperial ship that was destroyed during that round. For each reinforcement, he takes one "Academy Pilot" Ship card and places it outside the play area. Then he places one "Academy Pilot" ship within Range 1 of **either player's edge** of the play area. The Imperial player can assign maneuvers to this ship and use it as normal.

Note: For details on how ships interact with asteroid tokens, see "Obstacles" on page 20.

OBJECTIVES

Rebel Victory: The disabled ship must flee off **either player's** edge of the play area during Round 5 or later. If it flees in this way, it is not considered destroyed.

Any ships that flee before Round 5, or flee from a non-Imperial/non-Rebel edge of the play area, are destroyed as normal (see "Fleeing the Battlefield" on page 17).

Imperial Victory: Destroy the disabled ship.

MISSION 3: DARK WHISPERS

Imperial scouts have located a Rebel holonet satellite network, critical to maintaining secret communications across the entire galaxy. If Imperial ships can get close enough, they can download and decipher the encrypted Rebel transmissions. The Rebel defenders must hold off the Imperial fighters until security safeguards can be implemented to lock down the transmissions, disabling the holonet network but keeping the data safe.

Mission Setup

Rebel: Red Squadron Pilot (Proton Torpedoes, R2-F2)

Imperial: Black Squadron Pilot (Determination), Obsidian Squadron Pilot

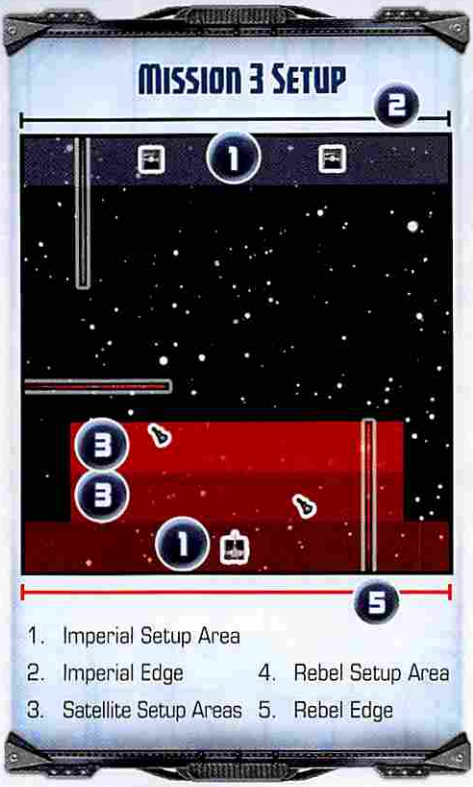

The Imperial player places his ships within Range 1 of his edge of the play area.

Then the Rebel player places one satellite token within Range 3, one satellite token within Range 2, and his ship(s) within Range 1 of his edge of the play area. (If playing with 100-point squads, the Rebel player places one additional satellite token within Range 3 and one additional satellite token within Range 2 of his edge of the play area.)

Satellite Token

Each satellite token must be at **Range 2 or farther** away from both side edges of the play area. After placement, each satellite must be at Range 2–3 of at least one other satellite.

Special Rules

- **Scanning:** Instead of performing an attack during the Combat phase, an Imperial ship that is overlapping a satellite token may **SCAN** the token. To do so, he removes that satellite token from the play area and places it on the scanning ship's Ship card (see "Objectives" below). A ship may scan more than one satellite token.

  If a Rebel ship is overlapping a satellite, an Imperial ship that is touching that Rebel ship may scan the satellite as if the Imperial ship were overlapping the satellite token.

  If an Imperial ship is destroyed after scanning one or more satellite tokens, return all satellite tokens on its Ship card to the supply.

- **Rebel Reinforcements:** During the End phase, the Rebel player may call for one **REINFORCEMENT** for each Rebel ship that was destroyed during that round. For each reinforcement, he takes one "Rookie Pilot" Ship card and places it outside the play area. Then he places one "Rookie Pilot" ship within Range 1 of **his edge** of the play area. The Rebel player can assign maneuvers to this ship and use it as normal.

Objectives

Rebel Victory: Destroy all Imperial ships (or return all satellite tokens to the supply).

Imperial Victory: After all satellite tokens have been scanned, at least one Imperial ship that scanned a satellite must flee off the Imperial edge of the play area. Ships that flee in this way are not considered destroyed.

Any ships that flee before all satellite tokens have been scanned, or flee from the non-Imperial edge of the play area, are destroyed as normal (see "Fleeing the Battlefield" on page 17).

Mission 4: Den of Thieves

Because of their fundamental role in the Imperial Navy, Sienar engineers are vital to the Empire's hold on the galaxy. Their ceaseless toil is responsible for the most recent starship prototype, currently in transit to rendezvous with the Imperial Fleet. Alliance Intelligence discovered it only days ago and offered a substantial reward for the prototype's capture. Rebel-aligned smugglers are prepared to ambush the vulnerable shipment, and the modest Imperial escort must safely deliver its precious cargo.

MISSION SETUP

Rebel: 100 Squad Points

Imperial: 100 Squad Points

The Imperial player places his ships within Range 1–3 of the Imperial edge of the play area and not within Range 1 of the neutral edges of the play area. Then the Imperial player chooses two of his ships and assigns one escort token to each (insert the tokens into the tower of each ship's base).

Escort Token

Then the Imperial player places three container tokens within Range 1–3 of the Imperial edge of the play area. A container token cannot be placed within Range 1 of the neutral edges of the play area, and it must be at **Range 3 or farther** away from each other container token. The container tokens must be oriented to face directly toward the Rebel edge of the play area as depicted in the setup diagram.

Container Token

Then the Rebel player places his ships within Range 1 of the Rebel edge **or the neutral edges** of the play area. A Rebel ship cannot be placed within Range 1–2 of a container token. Then the Rebel player assigns the smuggler token to one of his ships, inserting the token into the tower of that ship's base.

Smuggler Token

SPECIAL RULES

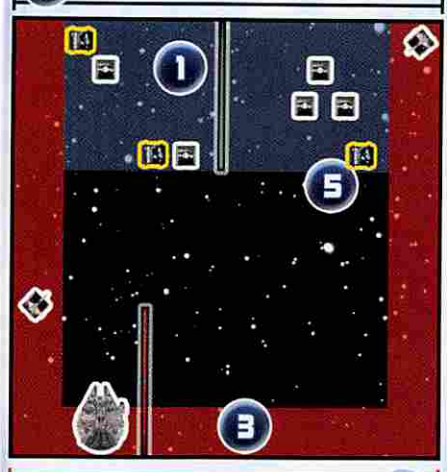

- **Steal Action:** The Rebel ship with the smuggler token may perform the **STEAL** action on a container token within Range 1. To perform the steal action, the Rebel player simultaneously rolls three attack dice and three defense dice. If he rolls **more** ✲ results than ⁘ results, he removes the container token from the play area and places it next to his Ship cards. If the number of ✲ results is equal to or less than the number of ⁘ results, he places one tracking token on the smuggler's Ship card. Each tracking token automatically adds one ✲ result to each future steal action roll. The steal action may be performed even if the ship has stress tokens.
- **Containers:** Container tokens do not count as ships or obstacles, and they cannot be attacked or destroyed. At the **start** of the End phase, each container token executes a [↑ 2] maneuver toward the Rebel edge. If a container token is within Range 1 of **one** ship with an escort token, it executes a [↑ 3] maneuver instead. If a container token is within Range 1 of **two** ships with escort tokens, it executes a [↑ 4] maneuver instead.
- **Escort Tokens:** When a ship with an escort token is destroyed, the Imperial player may place that token on one of his other ships at the **end of the End phase**. He cannot place it on a ship that already has an escort token.
- **Smuggler Token:** At the end of the Planning phase, the Rebel player may assign the smuggler token to another one of his ships. When the smuggler token is assigned to a new ship, discard all tracking tokens from the previous ship.

OBJECTIVES

Rebel Victory: Collect two container tokens next to your Ship cards.

Imperial Victory: Two containers must flee off the Rebel edge of the play area. You may win even if all of your ships are destroyed.

Mission 4 Setup

1. Imperial Setup Area
2. Imperial Edge
3. Rebel Setup Area
4. Rebel Edge
5. Container Token

Mission 5: Preystalker

On Tatooine, the cantinas are empty thanks to the latest Holonet transmission—a high price has been set on the leader of the Rebel forces desperately fleeing the area. Scum and villainy across the planet scramble to claim the bounty. But the best hunters have already found their prey, assailing the Rebel squadron as it turns to face the relentless pursuit.

MISSION SETUP

Rebel: 150 Squad Points (see rules below)

When the Rebel player builds his squad, he must choose one of his ships to have a **BOUNTY**. The squad point cost of this ship is doubled. Regardless of the number of icons in its upgrade bar, treat this ship as having two upgrade icons. Reduce the combined cost of all Upgrade cards equipped to the ship by 10 (to a minimum of 0).

Bounty Token

Imperial: 90 Squad Points

The Rebel player places his ships anywhere in the play area that is not within Range 1–3 of the Rebel or Imperial edges of the play area. Each Rebel ship must directly face the Rebel edge of the play area as depicted in the setup diagram. Each ship placed by the Rebel player receives one stress token.

Then the Rebel player inserts the bounty token into the tower of the Rebel ship's base that he chose during squad building.

Then the Imperial player places his ships within Range 1–3 of the Imperial edge of the play area.

SPECIAL RULES

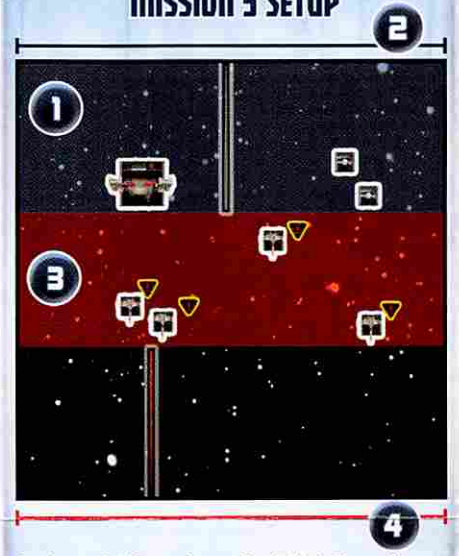

There are no special rules for this mission.

OBJECTIVES

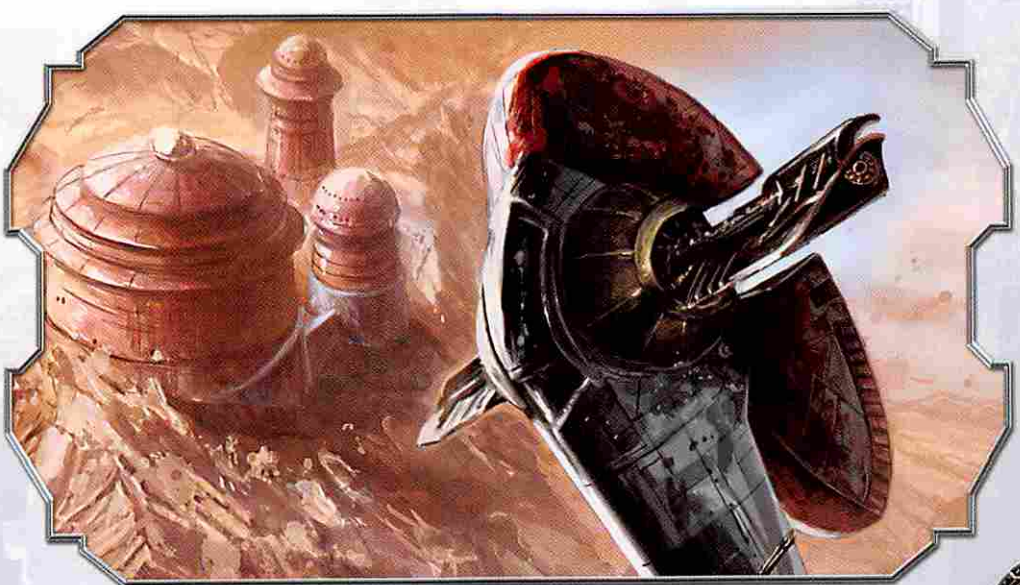

Rebel Victory: Destroy all Imperial ships.

Imperial Victory: Destroy the ship with the bounty.

Mission 5 Setup

1. Imperial Setup Area
2. Imperial Edge
3. Rebel Setup Area
4. Rebel Edge

Mission 6: Undeniable Assets

Imperial Intelligence deployed a team of undercover agents on a convoy contracted to Xizor Transport Systems, hoping to uncover the Alliance's infrastructure. Rebel sympathizers in the convoy discovered the plot and disabled the convoy before it could return to Imperial space. The Empire's forces must cover the agents as they escape; any agents forced to flee without escort will surely fall into Rebel hands.

MISSION SETUP

Rebel: 100 Squad Points

Imperial: 120 Squad Points

Disabled Ship Token

The Rebel player places one disabled ship token into the play area. Then he places two more disabled ship tokens into the play area, each at Range 3 of the first disabled ship and **not** at Range 1 of each other. Disabled ships cannot be placed within Range 1 of any edge of the play area. Then he places four passengers (tracking tokens) on each disabled ship.

Tracking Token

Then the Rebel player places his ships anywhere within Range 1–2 of the upper-left and/or lower-right corners of the play area as depicted in the setup example.

Then the Imperial player places his ships anywhere within Range 1–3 of the lower-left corner of the play area and/or within Range 1 of the upper-right corner of the play area as depicted in the setup example.

SPECIAL RULES

- **Disabled Ships:** Treat each disabled ship as an Imperial ship with an agility value of "3." Disabled ships cannot execute maneuvers, perform actions, or attack. They do not receive Damage cards and cannot be destroyed.

- **Rescue Action:** Imperial ships may perform a **RESCUE** action when within Range 1 of a disabled ship. To perform a rescue action, the Imperial player takes as many passengers as desired from one disabled ship at Range 1 and assigns them to the ship performing the action. Then, **for each passenger** rescued during this action, the ship suffers damage equal to the speed of the maneuver it executed. For example, if a *Lambda*-class shuttle executes a 3-speed maneuver and rescues two passengers, it suffers six damage. The rescue action cannot be performed as a free action.

- **Capturing Passengers:** When a disabled ship suffers one or more critical damage from an attack, the Rebel player captures **one** passenger on that ship. Alternatively, if an Imperial ship is destroyed, the Rebel player captures all rescued passengers assigned to that ship. Captured passengers are placed next to the Rebel player's Ship cards.

- **Securing Passengers:** If an Imperial ship with one or more passengers flees the play area off an Imperial edge, it is not destroyed. Instead, the Imperial player **SECURES** all passengers on that ship, placing them next to his Ship cards. At the start of the End phase, that ship may be placed within Range 1 of either Imperial edge of the play area with all of the Upgrade cards, shield tokens, and Damage cards it had when it fled.

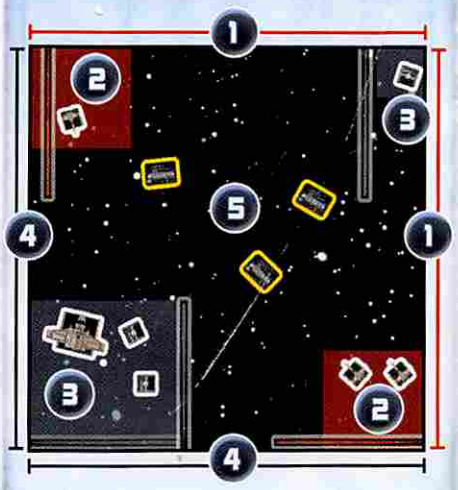

- **Rebel Reinforcements:** At the end of the End phase, the Rebel player may call for one reinforcement for each Rebel ship that was destroyed during that round. For each reinforcement, he takes the Ship card with the lowest squad point cost matching the destroyed ship's type and places it outside the play area. Then he places the matching ship within Range 1–2 of any corner chosen by the **Imperial** player. The Rebel player can use this ship as normal.

OBJECTIVES

Rebel Victory: Capture six passengers or destroy all Imperial ships (excluding disabled ships).

Imperial Victory: Secure five passengers.

Mission 6 Setup

1. Rebel Edges
2. Rebel Setup Areas
3. Imperial Setup Areas
4. Imperial Edges
5. Disabled Ship Tokens

New Upgrade Cards

Modifications and Titles

Modifications and titles are special upgrades that do not appear in any ship's upgrade bar. Any ship may equip a modification or title unless the card is restricted to a specific type of ship. Each ship is limited to **one** modification and **one** title.

Ship-Restricted Upgrades

Some of the Upgrade cards in this expansion pack are labeled "*TIE Interceptor Only*." Cards with this label can only be equipped to TIE interceptor ships.

Mission 7: Cutting the Cord

Alliance intel has speculative data on a new flight system that tremendously enhances the abilities of a normal starfighter. Recon images of hidden Imperial facilities suggest the prototype still depends on short-range broadcasts from these structures. Rebel Command has dispatched a strike team to destroy these assets; if the prototype gains long-range functionality, Rebel fighters will never again enjoy space superiority.

Mission Setup

Tracking Token

Rebel: 110 Squad Points; The Rebel player must assign two operatives (tracking tokens) to one of his Ship cards.

Prototype ID Token

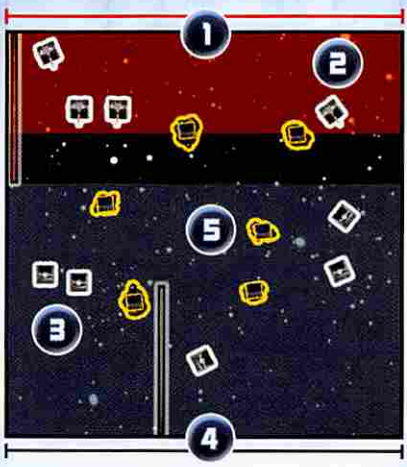

Imperial: 100 Squad Points; The Imperial player must field a non-unique ship as the **PROTOTYPE**, and he assigns the prototype ID token to it.

The Imperial player places six asteroid tokens into the play area. Each asteroid must be placed at Range 1–2 of at least one other asteroid without overlapping, and they cannot be placed at Range 1 of any edge. Then the Imperial player secretly looks at each function token and places each one facedown on a different asteroid.

Then the Rebel player may move up to three asteroids to anywhere at Range 1 of their original positions. Then he chooses which edge of the play area is his edge. The Imperial player's edge is the opposite edge.

Then the Imperial player places his ships anywhere in the play area that is not within Range 1–3 of the Rebel edge. Then the Rebel player places his ships within Range 1–2 of the Rebel edge of the play area. The Rebel player has initiative.

Mission 7 Setup

1. Rebel Edge
2. Rebel Setup Area
3. Imperial Setup Area
4. Imperial Edge
5. Facilities

SPECIAL RULES

- **Facilities:** Each asteroid and function token pair is a **FACILITY**. Facilities are treated as obstacles that can be attacked, target-locked, damaged, and destroyed as if they were Imperial ships. Each facility with a facedown function token has a hull value of "3" and an agility value of "4." Each faceup facility token has an agility value of "2".

Function Token

- **Deploying Operatives:** When the Rebel ship with the operatives executes a maneuver and overlaps a facility, it may deploy one operative. To do this, the Rebel player removes one operative from that ship's Ship card and places it next to the ship's base. While this token is assigned to the ship's base, the ship's agility value is reduced to 0. If this ship deploys an operative, it does not roll for damage from overlapping the facility.

- **Sabotage:** At the start of the End phase, if the Rebel player deployed an operative this round, he may look at a function token assigned to one facility that the operative's ship overlaps. Then, he must either return the operative to the game box to destroy that facility, or return the operative to the Ship card that it was deployed from. If the operative's ship is destroyed before the End phase, the operative is returned to the game box without effect.

- **Sync Action:** The prototype may perform the **SYNC** action. To perform this action, the prototype chooses one facility within Range 1 and flips its function token faceup. Faceup function tokens convey the following effects to the prototype:

When attacking, you may change all of your ✷ results to ✲ results.

You may perform 1 additional attack during your activation in the Combat phase.

Increase your primary weapon value by 2 and your agility value by 1.

Increase your hull value by 3.

You cannot be attacked with secondary weapons.

You may treat all of your maneuvers as green maneuvers.

- **Destroying Facilities:** When a facility suffers damage or critical damage, instead of drawing Damage cards, assign a damage token to it to indicate its current damage. When a facility is destroyed, its function token and damage token are returned to the game box and its effect is no longer active. The asteroid remains in play as an obstacle.

Damage Token

OBJECTIVES

Rebel Victory: Destroy the prototype.

Imperial Victory: Destroy all Rebel ships.

Target Lock Tokens

A ship that acquires a target lock on a huge ship must acquire that lock on a single section of the huge ship. The closest point of the chosen section must be within range. The red target lock token is placed next to the chosen section of the huge ship and its effect only applies to that section.

Obstructing

When a ship performs an attack, if its closest-point-to-closest-point line passes through any part of a section of a huge ship and that huge ship is not the target, the attack is obstructed; the defender rolls one additional defense die.

Free Actions

Huge ships cannot perform free actions.

Assault Missiles

If a huge ship is attacked by Assault Missiles, which damages all ships at Range 1 of the defender, the player measures range from the **targeted section**. The huge ship's other section does not suffer damage in this case.

USING THE GR-75 AS AN OBSTACLE

Players may use the GR-75 ship as an obstacle instead of as a Rebel ship during a standard game. To do so, flip the ship token to the starfield side and follow the rules for adding obstacles described on page 20 of the core set rulebook, with the following change: one player places the GR-75 first instead of his three asteroid tokens.

The GR-75 obstacle is not controlled by any player. It uses the rules for overlapping and obstructing described under the "Huge Ship Rules" section of this rulebook. It does not move, and it cannot be attacked, damaged, or destroyed.

NEW UPGRADE CARDS

The following sections describe Upgrade cards included in this expansion.

Modifications and Titles

Modifications and titles are special upgrades that do not appear in any ship's upgrade bar. Any ship may equip a modification or title unless the card is restricted to a specific type of ship. Each ship is limited to **one** modification and **one** title.

Faction-Restricted Upgrades

Some of the Upgrade cards in this expansion pack are labeled "*Rebel only*." Cards with this label **cannot** be fielded in Imperial squads.

Ship-Restricted Upgrades

Some of the Upgrade cards in this expansion pack are labeled "*Huge Ship only*." Cards with this label cannot be equipped by small or large ships.

Limited Upgrades

Some of the Upgrade cards in this expansion pack are labeled "*Limited*." A ship cannot equip multiple copies of the same card if that card is labeled as "*Limited*."

THE EVACUATION OF HOTH

The Evacuation of Hoth campaign follows the desperate escape of a GR-75 and its escort as they flee Hoth and avoid destruction at the hands of the Empire.

The following sections include the rules for playing the Evacuation of Hoth campaign. This campaign consists of three missions (H1, H2, and H3), which players play consecutively. The players must read the setup and special rules for each mission before setting up the campaign.

CAMPAIGN SETUP

To set up this campaign, follow these steps:

1. **Choose Sides:** Players decide who will be the Rebel player and who will be the Imperial player.

2. **Complete Roster:** Each player simultaneously plans for the campaign by completing his own roster sheet. Each player should keep his roster concealed from his opponent.

   To complete the Imperial roster sheet, the Imperial player builds an individual squad for each of the three campaign missions. The Imperial player must follow the setup rules described in each mission when building his squads. If he includes a unique Ship card or Upgrade card (excluding Upgrade cards) in a squad for a mission, he cannot use that same card in a squad for a subsequent mission.

Sample of a completed Imperial roster sheet

To complete the Rebel roster, the Rebel player builds a fleet. His fleet is the pool of ships from which he builds his squads for each mission. He chooses up to nine Ship cards and writes each chosen Ship card's name in the "Ships" column of his roster sheet. If he chooses any unique ships, he may equip Upgrade cards to those ships by writing each Upgrade card's name in the "Upgrades" column of his roster sheet next to the name of the unique ship he equipped it to.

The total cost of the Rebel fleet cannot exceed 200 squad points. The GR-75 Ship card and "Combat Retrofit" do not count against this total. Other upgrades equipped to a GR-75 still cost the amount of squad points indicated on those cards.

Sample of a completed Rebel roster sheet

Additionally, the Rebel player chooses eight different Upgrade cards (regardless of cost) and writes the name of each card he chooses in the "Resources" column of his roster sheet. He cannot list each Upgrade card more than once in the "Resources" column.

BEFORE EACH MISSION

Before setup of each mission during the Evacuation of Hoth campaign, follow these steps:

1. **Gather Imperial Squad:** The Imperial player gathers the squad he built for the forthcoming mission during step 2 of campaign setup.

2. **Build Rebel Squad:** The Rebel player builds his squad for the forthcoming mission by choosing one or more rows listed in the "Fleet" column. He gathers the ships listed in the chosen rows and equips them with the indicated upgrades (even if these upgrades were discarded during a previous mission).

   He may field a non-unique ship in place of a unique ship and its equipped upgrades as long as the ships are of the same type. He may equip any of his ships with upgrades from the "Resources" column by paying the squad point cost for each copy of each upgrade that he equips. Upgrades equipped in this way are only equipped for the forthcoming mission and remain in the "Resources" column for possible future use.

AFTER EACH MISSION

After determining the winner of a mission, each player resolves the following effects in this order before proceeding to the next mission.

1. **Resolve Imperial Effects:** The Imperial player may choose one faceup Damage card assigned to the GR-75, or he may randomly choose one of the GR-75's facedown Damage cards if it has at least five Damage cards. The Rebel player writes the name of this Damage card in the "Damage" row of the appropriate Mission Results box on his roster sheet. The GR-75 starts each subsequent mission with the chosen Damage card faceup, even if it is flipped facedown or discarded during a mission.

   Furthermore, if the Imperial player won the mission, he may look at the Rebel player's roster sheet and erase either **one** row from the "Ships" column (excluding the GR-75) or **two** rows from the "Resources" column. He cannot choose a ship that was fielded in and survived the mission. If he chooses a row with a unique ship, the ship is replaced by the non-unique ship of the same type with the lowest squad point cost.

2. **Resolve Rebel Effects:** The Rebel player erases the rows for unique ships that were destroyed during the mission. Each unique ship removed in this way is replaced by the non-unique ship of the same type with the lowest squad point cost.

   Then the Rebel player chooses one of his unique ships that survived the mission (if any); he may equip free upgrades to that ship. The upgrades he equips cannot exceed five squad points, and he may equip upgrades that are not listed in the "Resources" column of his roster sheet. These upgrades do not count against his available squad points for future missions. The chosen ship and upgrades are recorded in the appropriate Mission Result box on the roster sheet.

   Furthermore, if the Rebel player won the mission, he may look at the column for the next mission (and only that column) on the Imperial roster sheet.

WINNING THE CAMPAIGN

The player who wins Mission 3 wins the Evacuation of Hoth campaign.

NON-CAMPAIGN PLAY

If players wish to play Mission 8 or a single mission from the Evacuation of Hoth campaign, they ignore the campaign rules described above and follow the setup rules described in the mission.

Mission H1: Evacuation

The GR-75 departs from Echo Base and soars out of Hoth's atmosphere, but it must travel through an Imperial minefield on its way. The Rebel forces escorting the GR-75 struggle to override the mines' programming and seize control of them in order to buy precious time for the transport to escape.

MISSION SETUP

Rebel: GR-75 (Combat Retrofit), 125 squad points

Imperial: 100 squad points

The Imperial player places six mine tokens anywhere in the play area that is not at Range 1–2 of another mine token or any edge. Then he places one control token with the Imperial side faceup on each mine token. Then he places his ships within Range 1 of the Imperial edges of the play area.

Mine Token

Then the Rebel player places his ships within Range 1–3 of the upper-left corner of the play area as shown in the setup example.

Control Token

The Rebel player has initiative.

SPECIAL RULES

- **Mine Tokens and Control Tokens:** Mine and control tokens are not obstacles. Each mine token has a control token on it indicating which faction controls the mine.
- **Controlling a Mine:** At the beginning of each End phase, each player counts the number of ships he has at Range 1 of each mine token. The player with more ships at Range 1 of a mine token (excluding the GR-75) takes control of that token. Ships with a printed pilot skill value of "5" or higher count as two ships when determining control of mine tokens. If the players tie for control of a mine token, control of that token does not change.
- **Intercepting the Transport:** At the beginning of each End phase, the Imperial player may choose one Imperial-controlled mine token that is within Range 1–3 of the GR-75 and trigger the chosen token's effect. If he does so, he removes the chosen mine token and its control token from the play area.
- **Mine Token Effects:** The effect of a mine token is determined by its proximity to the GR-75. The effects are described below and are presented in the format Range 1/Range 2/Range 3:

Roll 3/2/1 attack dice. The GR-75 suffers 1 critical damage for each ✷ or ✲ result.

Roll 6/4/2 attack dice. The GR-75 suffers 1 damage for each ✷ or ✲ result.

The Imperial player takes 5/3/1 stress tokens and assigns them to any Rebel ships in the play area, excluding the GR-75. He can assign more than one stress token to a single ship.

The GR-75 must immediately execute a [↑ 3] / [↑ 2] / [↑ 1] maneuver backward, as though the back of the ship were the front of the ship.

The Imperial player takes 3/2/1 ion tokens and assigns them to any Rebel ships on the play area. He can assign more than one ion token to a single ship if he wishes.

The Imperial player may choose 3/2/1 random facedown Damage cards assigned to the GR-75, flip them faceup, and resolve them.

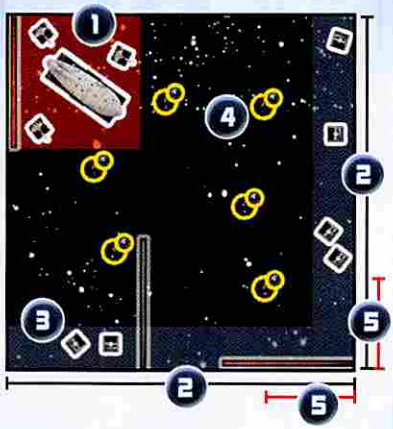

- **Imperial Reinforcements:** At the end of each End phase, the Imperial player may call for one reinforcement for each Imperial ship with a pilot skill value of "4" or higher that was destroyed that round, excluding ships that fled or were overlapped by the GR-75. For each reinforcement, he takes the lowest-cost Ship card that matches the destroyed ship's type and places it outside the play area. Then he places the matching ship within Range 1–2 of any corner chosen by the **Rebel** player. The Imperial player uses this ship as normal.

OBJECTIVES

Rebel Victory: The GR-75 must flee the play area with a portion of one section still in the play area at Range 1–2 of the corner shared by both Imperial edges.

Imperial Victory: Destroy the GR-75.

Mission H1 Setup Example

1. Rebel Setup Area
2. Imperial Edges
3. Imperial Setup Area
4. Mine & Control Tokens
5. Rebel Objective Edges

Mission H2: Blockade Run

As the invasion of Hoth rages below, the GR-75 escapes into orbit and plunges headfirst into the Imperial blockade. Imperial forces scramble to intercept the transport before it passes beyond the range of the merciless salvos of turbolasers. With the help of Hoth's planetary ion cannon, however, the Rebel forces may be able to punch through the blockade and make the jump to hyperspace!

MISSION SETUP

Rebel: GR-75 (Combat Retrofit), 140 squad points

Imperial: 200 squad points

The Rebel player places the GR-75 in the play area so that the entire rear edge of the rear base touches the Rebel edge.

Then the Imperial player places up to 50 squad points worth of his ships at Range 3 of the Imperial edge.

The Imperial player must split his remaining ships into four groups. To do so, he places a group token next to the play area and assigns one or more of his ships to that token. The group of ships assigned to group tokens "A" and "C" must have 45–55 squad points worth of ships each; the groups assigned to group tokens "B" and "D" must have 25–35 points each.

Group Token

Then the Imperial player places four scope tokens in the play area. He must place each scope token flat against an edge of the play area, and he must place each scope token beyond Range 1 of each other scope token and the GR-75.

Scope Token

Then the Rebel player places his remaining ships within Range 1–2 of the Rebel edge.

The Rebel player has initiative and two ion blast tokens. The Imperial player has three turbolaser tokens.

SPECIAL RULES

Tracking Token

- **Tracking Rounds:** At the start of each Planning phase (including the first Planning phase), the Rebel player takes one tracking token from the supply and places it near his Ship cards outside the play area. The number of tracking tokens indicates the current round number (see "Objectives").

- **Targets Inbound:** At the end of the following rounds, the Imperial player must place the indicated group of ships into the play area:
  - **Round 2:** Group "A"
  - **Round 4:** Group "B"
  - **Round 6:** Group "C"
  - **Round 7:** Group "D"

To place a group, the Imperial player places each ship of the indicated group into the play area at Range 1 of the matching scope token (marked with the same letter). Then he removes that scope token from the play area.

- **Heavy Bombardment:** At the start of each End phase, the Imperial player may place one of his remaining turbolaser tokens in the play area. He must place the token within Range 1–2 of either neutral edge of the play area, and he cannot place it under a ship. Then the Rebel player may place one of his remaining ion blast tokens in the same way.

Turbolaser Token

Ion Blast Token

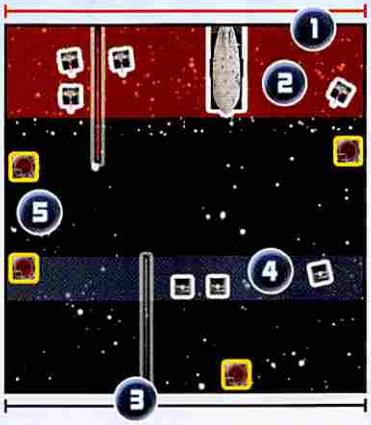

- **Crossfire:** At the end of each Activation phase, each ship at Range 1–2 of a turbolaser token and inside its firing arc rolls 3 attack dice and suffers 1 damage for each ✷ result. Each ship at Range 1–2 of an ion blast token and inside its firing arc receives 1 ion token, rolls 2 attack dice, and suffers 1 damage for each ✷ result. Then remove all turbolaser and ion blast tokens from the play area and return them to the game box. A ship that is overlapping a turbolaser or ion blast token also suffers the token's effect, even if it is outside the token's firing arc.

OBJECTIVES

Rebel Victory: The GR-75 survives after 8 rounds.

Imperial Victory: Destroy the GR-75.

Mission H2 Setup Example

1. Rebel Edge
2. Rebel Setup Area
3. Imperial Edge
4. Imperial Setup Area
5. Scope Tokens

Mission H3: Asteroid Gauntlet

With the bulk of the blockade behind them, the GR-75 and its escorts plunge into the nearby asteroid field. The continued existence of the Rebellion rests squarely on their shoulders as they make one last desperate effort to evade Imperial pursuit before jumping to hyperspace.

MISSION SETUP

Rebel: GR-75 (Combat Retrofit), 125 squad points

Imperial: 125 squad points

The Imperial player places the six asteroid tokens from the core set in the play area. He cannot place an asteroid token at Range 1–2 of any edge of the play area or at Range 1 of another asteroid token.

Then the Rebel player places the GR-75 within Range 1–3 of the Rebel edge, but not at Range 1–2 of the neutral edges. He places his remaining ships at Range 1 of the GR-75. Then he assigns the four role tokens to his ships, excluding the GR-75. He may assign up to two role tokens to a single ship.

Role Token

Then the Imperial player places his ships within Range 1 of any edge. He cannot place a ship at Range 1 of another ship. He must place at least 50 points worth of Imperial ships within Range 1 of the Imperial edge.

The Rebel player has initiative.

SPECIAL RULES

Maneuver Token

- **Surround:** During each End phase, for each Imperial ship at Range 1 of the GR-75, the Imperial player chooses one maneuver token and gives it to the Rebel player. Ships with a printed pilot skill value of "5" or higher count as three ships for this purpose. During the next Planning phase, the Rebel player **cannot** choose or execute a maneuver on the GR-75's maneuver dial that matches any of the maneuver tokens he received from the Imperial player. If the Rebel player has all eight maneuver tokens, the Imperial player chooses a maneuver for the GR-75 when it activates during the Activation phase. At the start of each End phase, the Rebel player returns all maneuver tokens to the Imperial player.
- **Obstacles:** In this mission, the GR-75 interacts with obstacle tokens as described in the "Overlapping Obstacles" section on page 5 of this rulebook. However, in addition to receiving a Damage card, the GR-75 loses one action during the "Perform Action" step (to a minimum of 0).
- **Escort Roles:** Each role token grants one of the following effects while the ship with the token is at Range 1–2 of the GR-75:

Increase the primary weapon value of this ship by 1.

This ship may skip its "Perform Action" step to allow the GR-75 to immediately perform a free reinforce action. This is an exception to the GR-75's inability to perform free actions.

The GR-75 gains 1 additional energy token during its "Gain Energy" step.

The GR-75 may perform 1 additional action during its "Perform Action" step. This action cannot be a reinforce or recover action.

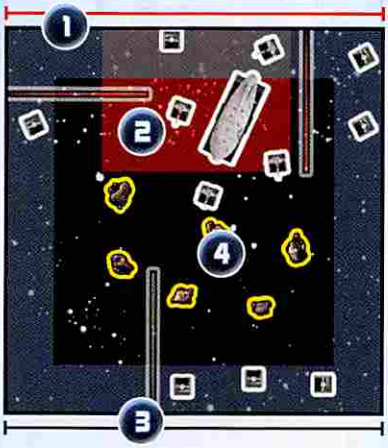

- **Imperial Reinforcements:** At the end of each End phase, the Imperial player may call for one reinforcement for each Imperial ship with a pilot skill value of "4" or higher that was destroyed that round, excluding ships that fled or were overlapped by the GR-75. For each reinforcement, he takes the lowest-cost Ship card that matches the destroyed ship's type and places it outside the play area. Then he places the matching ship within Range 1–2 of any corner chosen by the **Rebel** player. The Imperial player uses this ship as normal.

OBJECTIVES

Rebel Victory: The GR-75 survives after 8 rounds.

Imperial Victory: Destroy the GR-75.

Mission H3 Setup Example

1. Rebel Edge
2. GR-75 Setup Area
3. Imperial Edge
4. Asteroid Tokens

Mission 8: Rendezvous

After escaping from the Hoth system, three straggling transports rendezvous at the predetermined coordinates and plan a course of action. Despite their best efforts, Imperial forces tracked one GR-75's sensor trail to the rendezvous point. As the Imperial trap springs, the Rebels scatter, hoping that the majority of the gathered forces manage to survive.

MISSION SETUP

Rebel: 3 GR-75s (each with Combat Retrofit), 200 squad points. On each GR-75, reduce the combined cost of the Upgrade cards equipped to that ship by 10 (to a minimum of 0).

Imperial: 250 Squad Points

The play area is 4' x 3'.

The Rebel player places his GR-75 ships in the play area. Each GR-75 must touch the Rebel edge and cannot be at Range 1–2 of a neutral edge.

Then the Imperial player places four hyperspace tokens along his edge. He must place each hyperspace token beyond Range 3 of each another hyperspace token.

Hyperspace Token

Then the Imperial player divides his ships into four groups. He must distribute his ships as evenly as possible among the groups (ignoring squad point cost). Then he places each group in the play area at Range 1 of a different hyperspace token.

Group Token

Then the Rebel player places his remaining ships within Range 1–3 of the Rebel edge.

Then the Imperial player removes one of the hyperspace tokens from the play area. For each remaining hyperspace token, he assigns the matching group token to a different GR-75.

The Rebel player has initiative.

SPECIAL RULES

- **Huge Ship Collisions**: If a GR-75 overlaps another GR-75, use the rules for "Overlapping Huge Ships" (see page 5 of this rulebook) with one exception: the GR-75 that just executed its maneuver **must skip** its "Use Energy" and "Perform Action" steps.

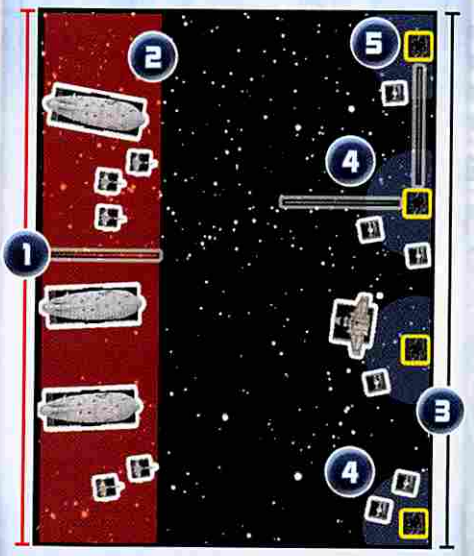

- **Assist Action:** Each GR-75 may perform the **ASSIST** action. To perform this action, the GR-75 chooses another GR-75 at Range 1–2. The chosen GR-75 may immediately perform one free action. This is an exception to the GR-75's inability to perform free actions.

OBJECTIVES

Rebel Victory: Two GR-75s must flee the play area; each must flee with a portion of one section still in the play area at Range 1 of the hyperspace token matching its group token.

Imperial Victory: Destroy two GR-75 ships.

Mission Booklet

The Point of No Return

The Point of No Return campaign follows a civilian CR90 whose crew accepts a shipment of Alliance contraband, not anticipating any Imperial entanglements. How will this crew respond when faced with the heavy-handed Imperial Navy?

The following sections include the rules for playing the Point of No Return campaign. This campaign consists of six missions (T1, T2a, T2b, T3a, T3b, and T4). The outcome of each mission determines which mission is played next. To determine the order, consult the "Campaign Structure" diagram after each mission.

The player who wins Mission T4 wins the campaign.

Campaign Setup

To set up this campaign, follow these steps:

1. **Choose Sides:** Players decide who will be the Rebel player and who will be the Imperial player.
2. **Gather Campaign Progress Sheet:** This expansion contains one Campaign Progress sheet, which is used to track which player has won each mission as well as to track which ships and upgrades have been destroyed over the course of the campaign.

Required Products for Missions

Some missions require the use of ***X-Wing*** products in addition to the Core Set and the ***Tantive IV Expansion Pack***. Below is a complete list of which products are required for each mission.

MISSION T1

- 1 TIE Fighter Expansion Pack
- 6 TIE fighters in total

MISSION T2A

- 1 TIE Interceptor Expansion Pack
- 1 A-Wing Expansion Pack
- 3 TIE fighters in total

MISSION T2B

- 1 TIE Bomber Expansion Pack
- 1 TIE Advanced Expansion Pack

MISSION T3A

- 1 TIE Advanced Expansion Pack
- 4 TIE fighters in total
- 1 X-Wing Expansion Pack

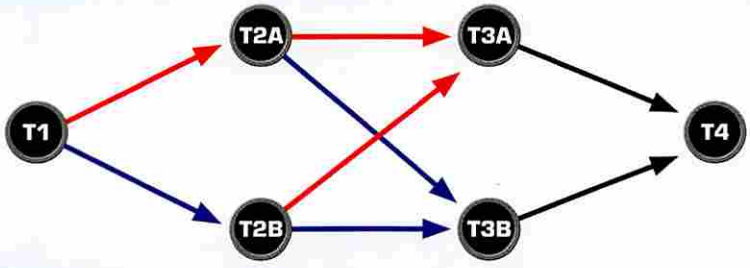

MISSION T3B

- 1 *Lambda*-class Shuttle Expansion Pack
- 1 TIE Fighter Expansion Pack
- 1 TIE Interceptor Expansion Pack
- **Either** 1 *Slave I* or *Millennium Falcon* Expansion Pack

MISSION T4

No specific products required.

Campaign Structure

Before Each Mission

Before setup of each mission during the Point of No Return campaign, follow these steps:

1. **Equip the CR90:** The Rebel player equips two "Single Turbolasers" cards, one "Gunnery Team" card, and one "Sensor Team" card to the CR90's fore section. Then, he equips one "Quad Laser Cannons" card, one "Engineering Team" card, and one "Tibanna Gas Supplies" card to the aft section. He cannot equip any other Upgrade cards to the CR90.

2. **Build Squads:** Each player builds the squad he will use in the forthcoming mission. Players cannot field ships or upgrades that are listed on the Campaign Progress sheet. The Rebel player must field a CR90 in each mission (fully equipped, as described above). Each mission describes its additional squad-building rules in detail.

PILOT AND UPGRADE RESTRICTIONS

Each Ship and Upgrade card listed below cannot be used in Missions T1, T2a, and T2b:

- Wedge Antilles
- Maarek Stele
- Colonel Jendon
- ST-321
- Turr Phennir
- "Backstabber"

Also, some missions instruct players to field a specific ship with one or more specific upgrades. In these cases, that player must equip the specified upgrades (and only those upgrades) to the specified ship.

During the Campaign

Missions T1, T3b, and T4 require the players to track the number of rounds. To do this, follow the rule below:

- **Tracking Rounds:** At the start of each Planning phase (including the first one), the Rebel player takes one tracking token from the supply and places it near his Ship cards, outside the play area. The number of tracking tokens indicates the current round number.

After Each Mission

After determining the winner of a mission, each player resolves the following effects in this order before proceeding to the next mission.

1. **Record Mission Winner:** On the Campaign Progress sheet, place a check mark in the box corresponding to the winner of the mission.

2. **Record Casualties:** Write the name of each **unique** Rebel ship and **unique** Rebel upgrade that was destroyed in the mission in the "Rebel" column of the Campaign Progress sheet. Then, write the name of each **unique** Imperial ship and **unique** Imperial upgrade that was destroyed in the mission in the "Imperial" column of the Campaign Progress sheet.

3. **Determine Next Mission:** Consult the "Campaign Structure" diagram on page 1 to determine which mission to play next.

Winning the Campaign

The player who wins Mission T4 wins the Point of No Return campaign.

Non-Campaign Play

If players wish to play a single mission from the Point of No Return campaign, they ignore the campaign rules described above and follow the setup and special rules as described in each mission. The Rebel player must use the CR90, but has 34 additional squad points that can be used only for equipping the CR90.

MISSION T2B

When playing this mission in non-campaign play, roll one attack die before setup. On a ✷ or ✲ result, deal the "Secondary Drive Failure" Damage card to the fore section of the CR90; on any other result, deal the "Projector Power Failure" Damage card to the aft section of the CR90.

MISSION T4

When playing this mission in non-campaign play, roll three attack dice before setup. The total number of ✷ or ✲ results represent how many missions the Imperial player has won throughout the campaign. This serves to determine the number of active charge tokens that the Imperial player takes and the number of scope tokens that the Rebel player removes.

Mission T1: Mistaken Identity

Ever since the captain of a CR90 Corellian Corvette ordered his crew to fill the cargo hold with unregistered tanks of Tibanna gas, the crew has been unsettled. Though far from their first unorthodox cargo, there is little doubt in their minds that this shipment is bound for the Alliance to Restore the Republic. What other customer would require such a large secret shipment? Who but the Rebel Alliance could require such vast quantities of untraceable, weaponizable Tibanna?

Though many onboard are sympathetic to the Rebel cause, few wish to risk the wrath of the Empire, and only a handful of firebrands advocate out-and-out rebellion. Even the promise of a generous bonus upon arrival has done little to quell the grumbling... or the fear.

The oppressive mood prevails even upon the bridge, and not an hour goes by without the captain cursing himself for his misplaced idealism. Each time the ship emerged from hyperspace to calculate a new jump, his hands tightened on the arms of his chair; only to relax when the viewport revealed another quiet, backwater planet. This time is different; through the wide windows of the bridge, he glimpses a small group of TIE fighters rounding the horizon of a nearby moon.

"Eyeballs en route! All hands on deck! What are they doing out here? I haven't see any star cruisers in this system."

With a jarring hiss of feedback, the comms system crackles to life.

"Unidentified CR90! Several transmissions were beamed to your ship by Rebel spies. Power down your weapons and prepare to be boarded."

Shocked at such a ridiculous accusation, but aware of the consequences of being caught with contraband, the captain of the CR90 stalls for time by assuming a diplomatic front while the crew begins frantically calculating a jump to lightspeed.

"We intercepted no transmissions. We are on a diplomatic mission."

"...This is your last warning, Rebel scum. Deactivate your turbolasers and surrender your vessel."

With no sign of slowing down, the flight of TIE/In accelerate on their approach.

"Approaching Imperials! Disengage approach vector or we shall consider you hostile! I repeat, we will be forced to fire!"

Shifting into attack formation, the TIEs prepare to engage.

MISSION SETUP

Rebel: CR90

Imperial: "Howlrunner" (Determination), 5 Black Squadron Pilots

The play area is 3' x 3'.

Starting with the Imperial player, the players take turns placing one asteroid token in the play area until all six asteroids have been placed. Asteroids must be placed beyond Range 2 of both players' edges, beyond Range 1 of both neutral edges, and beyond Range 1 of each other asteroid.

The Rebel player places the CR90 within Range 1–2 of the Rebel edge. Then the Imperial player places his ships within Range 1 of the Imperial edge.

The Rebel player has initiative.

SPECIAL RULES

There are no special rules for this mission.

OBJECTIVES

Rebel Victory: Neither section of the CR90 is crippled after 6 rounds.

Imperial Victory: One section of the CR90 is crippled. On the Campaign Progress sheet, place a check mark in the box corresponding to the CR90's crippled section.

Mission T1 Setup Example

1. Imperial Setup Area
2. Imperial Edge
3. Rebel Setup Area
4. Rebel Edge

Mission T2a: Refueling Ambush

Shaken by its unexpected encounter with the TIE patrol, the CR90 stops to refuel at a nearby station sympathetic to the Alliance. Before it can completely refuel, the battered remnants of the TIE patrol scream back into view—and they've brought company! With a refueling container still attached, the corvette fires up as the station's guards move to intercept.

MISSION SETUP

Rebel: CR90, 75 squad points; the Rebel player cannot field any unique Ship or Upgrade cards.

Imperial: Soontir Fel (Push the Limit), 3 Black Squadron Pilots, 75 squad points; the Imperial player cannot field more than one large ship.

The play area is 3' x 5'.

The Rebel player places the CR90 within Range 2 of the Rebel edge. He must place the CR90 such that it is parallel with the Rebel edge and approximately equidistant from both neutral edges. Then, he places the class-E cargo container in the play area so that the entire flat edge of the container is flush with the edge of the aft section's base that is nearest to the Imperial edge. Then, the Rebel player places four tracking tokens on the CR90's aft Ship card.

Class-E Cargo Container

The Imperial player places three Black Squadron Pilots at Range 1 of the Imperial edge. He must place these Black Squadron Pilots beyond Range 1 of each other. Then, he deals one facedown Damage card to each of these ships. Then, he places his remaining ships within Range 1 of the neutral edge nearest to the CR90's fore section.

Then the Rebel player places his ships within Range 1–3 of the CR90 and beyond Range 3 of the damaged Black Squadron Pilots.

The Rebel player has initiative.

SPECIAL RULES

- **Running on Fumes:** When the CR90 gains energy during its "Gain Energy" step, reduce the amount of energy it gains by one for each tracking token on the CR90's aft Ship card.

- **Docking:** At the start of the first round, the CR90 is **DOCKED**. At the start of the Activation phase, while docked, the Rebel player removes one tracking token from the CR90's aft Ship card. After removing a tracking token, the Rebel player chooses either to keep the CR90 docked or to **DETACH**. If the CR90 remains docked, it activates as normal but does not execute a maneuver. If you either choose to detach, or the container is destroyed, the CR90 is no longer docked and activates as normal during each following Activation phase.

- **Class-E Cargo Container:** The class-E cargo container is not an obstacle and can be attacked, target-locked, damaged, and destroyed as if it was a ship. It has an agility value of "2" and a hull value of "3". For each damage or critical damage the container suffers, place one damage token on it. When there are three or more damage tokens on the container, it is destroyed, and the Imperial player rolls four attack dice; all ships at Range 1 of the container suffer all damage (✷) and critical damage (✲) rolled. Then, remove the container from the play area along with its damage tokens.

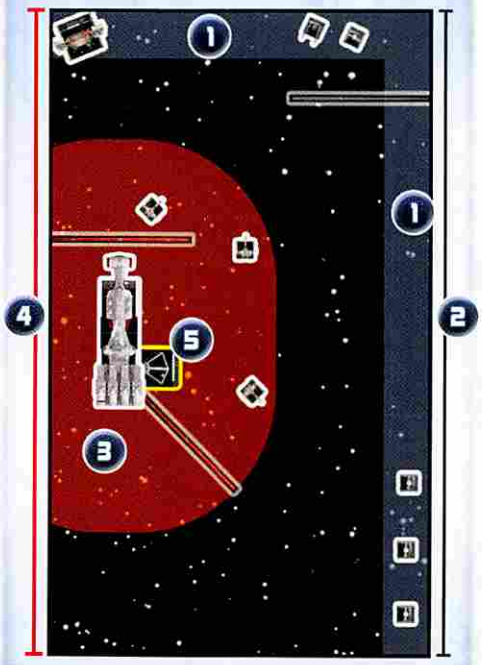

Damage Token

OBJECTIVES

Rebel Victory: The CR90 flees off the Imperial edge of the play area. Alternatively, destroy all Imperial ships.

Imperial Victory: One section of the CR90 is crippled.

Mission T2a Setup Example

1. Imperial Setup Areas
2. Imperial Edge
3. Rebel Setup Area
4. Rebel Edge
5. Class-E Cargo Container Token

Mission T2B: Emergency Repairs

Crippled by the TIE patrol, the CR90 escapes the engagement badly damaged and venting oxygen.

Desperate and out of options, the captain sends out a distress call. To his surprise, a Rebel way-station responds. With no recourse but to turn to the Alliance for help, he sets a course for the way-station.

One nerve-racking hyperspace jump later, with the ship docked at the orbital way-station, an Alliance repair crew moves expertly from deck to deck, WED Treadwell repair droids trailing along behind them like mobile multitools.

Midway through the repairs, the station's klaxons howl, signaling an impending threat. The captain of the corvette grabs the arm of a panicked repairman.

"What's going on here?"

"The Imperials are attacking! We need to evacuate!"

"What you need to do is get my ship operational, and nobody's going anywhere until you do!"

With the Rebel repair crew still onboard, the corvette must travel with all possible speed while the Rebels cover its escape.

MISSION SETUP

Rebel: CR90, 75 squad points; the Rebel player must field a single unique ship as part of his squad.

Imperial: Captain Jonus (Squad Leader, Proton Bombs), 100 squad points.

The play area is 3' x 6'.

The Imperial player places his ships within Range 1 of either of the Imperial edges.

Then, the Rebel player places his CR90 approximately equidistant from both Imperial edges with the fore section nearest to the neutral edge and with the aft section's base within Range 2 of the Rebel edge. Then, he places his remaining ships within Range 1–3 of the CR90.

Remove all shield tokens from the CR90. If the fore section was crippled in Mission T1, deal the "Secondary Drive Failure" Damage card to the fore section. If the aft section was crippled in Mission T1, deal the "Projector Power Failure" Damage card to the aft section.

The Rebel player has initiative.

SPECIAL RULES

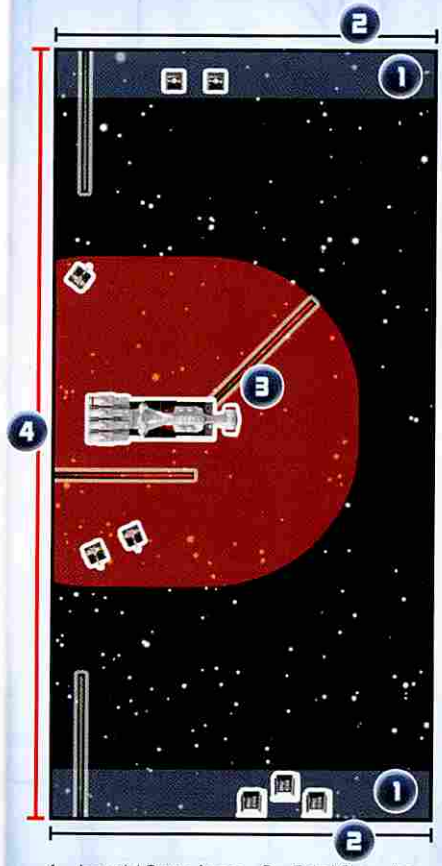

- **Engine Shutdown:** During the Planning phase of the first two rounds, the Rebel player does not assign a maneuver dial to the CR90. During the Activation phase of the first two rounds, the CR90 still activates, but it does not execute a maneuver. Instead, during the "Gain Energy" step, it gains three energy.
- **Potent Munitions:** When a bomb affects the CR90, apply the bomb's effect **twice** to the CR90.

OBJECTIVES

Rebel Victory: The CR90 must flee off the neutral edge of the play area.

Imperial Victory: One section of the CR90 is crippled.

Mission T2B Setup Example

1. Imperial Setup Areas
2. Imperial Edges
3. Rebel Setup Area
4. Rebel Edge

Mission T3a: Satellite Uplink

Having survived yet another Imperial entanglement, the captain of the CR90 vows to thwart the Empire in whatever way he can. Volunteering his services, he must stay near a satellite cluster in order to intercept an Imperial transmission of the utmost importance...

MISSION SETUP

Rebel: CR90, Wedge Antilles (Proton Torpedoes, R2 Astromech), 100 squad points; the Rebel player cannot field any **other** unique Ship or Upgrade cards.

Imperial: Maarek Stele (Cluster Missiles, Marksmanship), 4 Black Squadron Pilots, 100 squad points; the Imperial player may use squad points to equip these Black Squadron Pilots with Upgrade cards (this is an exception to the normal campaign rules).

The play area is 3' x 4'.

The Rebel player places the CR90 within Range 3 of the Rebel edge and approximately equidistant from both neutral edges. He must place the CR90 so that it is parallel to the Rebel edge.

Then, the Rebel player places five satellite tokens in the play area. He must place one satellite token within each range section (Range 1–5) from the Rebel edge. That is, he must place one satellite token within Range 1, one within Range 2, one within Range 3, and so on. He cannot place a satellite token within Range 1–2 of another satellite token or overlapping the CR90. Then, he places his remaining ships within Range 1–5 of the Rebel edge.

Then, the Imperial player places his ships within Range 1–2 of the Imperial edge.

The Rebel player has initiative.

SPECIAL RULES

- **Satellites:** Satellites are treated as obstacles that can be attacked, target-locked, damaged, destroyed, and have shields as if they were Rebel ships. Each satellite has a hull value of "2" and an agility value of "1." For each damage or critical damage a satellite suffers, remove one shield token. If the satellite had no shield token to remove, place one damage token near that satellite instead. When there are two or more damage tokens near a satellite, it is destroyed.

Damage Token

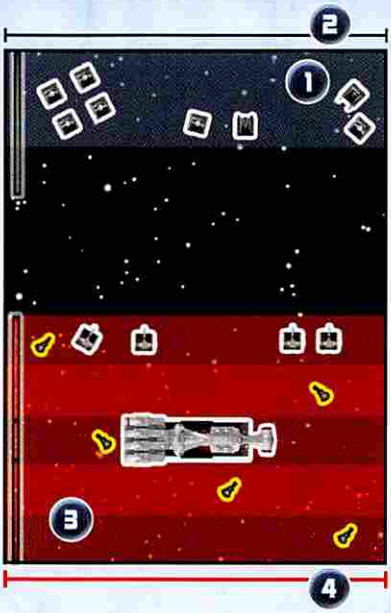

- **Destructive Feedback:** When a satellite is destroyed, remove the satellite and its damage tokens from the play area. Then, the Imperial player deals one faceup Damage card to either the fore or aft section of the CR90.
- **Protect the Satellites:** When the CR90 performs a recover action, it may either recover its own shields or assign shield tokens to one or more satellites. With this action, the Rebel player may recover the CR90's shields, assign shields to satellites, or any combination of these two (up to the number of energy tokens removed). A satellite cannot have more than two shields at any time.
- **Reinforce the Satellites:** When the CR90 performs a reinforce action, the Rebel player may assign the reinforce token to a satellite instead of to a section of the CR90.
- **Uploading Data:** During the Planning phase, the Rebel player does not assign a maneuver dial to the CR90. During the Activation phase, the CR90 still activates, but it does not execute a maneuver. Instead, during the "Gain Energy" step, it gains energy equal to the number of satellites remaining in the play area.

OBJECTIVES

Rebel Victory: Destroy all Imperial ships.

Imperial Victory: Destroy the CR90 or destroy all satellites.

Mission T3a Setup Example

1. Imperial Setup Area
2. Imperial Edge
3. Rebel Setup Area
4. Rebel Edge

Mission T3B: "Punch It!"

With the CR90's hyperdrive badly damaged, the crew scrambles to make repairs. A group of Rebel fighters arrive, announcing that they have intercepted an Imperial transmission that contains information vital to the survival of the Rebellion. Suddenly, an Imperial ambush springs into action! To protect this information, the Rebels beam the transmission to the CR90—just as the Imperials engage!

MISSION SETUP

Rebel: CR90, 80 squad points; the Rebel player cannot field more than one unique ship, any large ships or unique Upgrade cards.

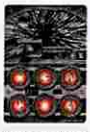

Imperial: Colonel Jendon (ST-321, Flight Instructor), "Backstabber," Turr Phennir (Veteran Instincts); 150 squad points. The Imperial player cannot field any **other** unique Ship or Upgrade cards.

When the Imperial player builds his squad, he must build three groups. Each group must contain one of the unique ships, and each group has an allotment of 50 squad points for other ships and upgrades.

The play area is 3' x 4'.

The Imperial player places six asteroids in the play area. He must place each asteroid beyond Range 2 of either of the neutral edges and of each other asteroid. Then, the Imperial player places **one** of his groups within Range 1–2 of the Imperial edge.

Then, the Rebel player places the CR90 and all of his other ships within Range 3–5 of the Rebel edge; he must place the CR90 parallel to the neutral edges and beyond Range 2 of the neutral edges. Then, he chooses either the fore or aft section and places the hyperdrive Mission card near the chosen section's Ship card. Then, he places one hyperdrive token on the hyperdrive card.

Hyperdrive Card

Then, the Imperial player places two scope tokens in the play area. He must place one scope token along the Rebel edge and one scope token along one of the neutral edges. He must place each scope token flat against its edge of the play area.

Scope Token

The Imperial player has initiative.

SPECIAL RULES

- **Incoming Waves:** At the end of Round 2, the Imperial player chooses one of the scope tokens. Then, he chooses one of his remaining groups and places its ships at Range 1 of the chosen scope token. Then he removes that scope token. At the end of Round 4, the Imperial player places the ships from his remaining group at Range 1 of the remaining scope token. Then, he removes the final scope token.

- **Hyperdrive:** The hyperdrive card has an energy limit of "5." During the "Allocate Energy" step, the Rebel player may allocate up to four energy tokens from the aft section of the CR90 to the hyperdrive card. At the start of the End phase, the Rebel player takes one attack die for each energy token and for each hyperdrive token on the hyperdrive card, and he rolls those attack dice. For every two ✷ results rolled, he places one hyperdrive token on the hyperdrive card. For every two 👁 results rolled, he removes one energy token from the hyperdrive card.

Hyperdrive Token

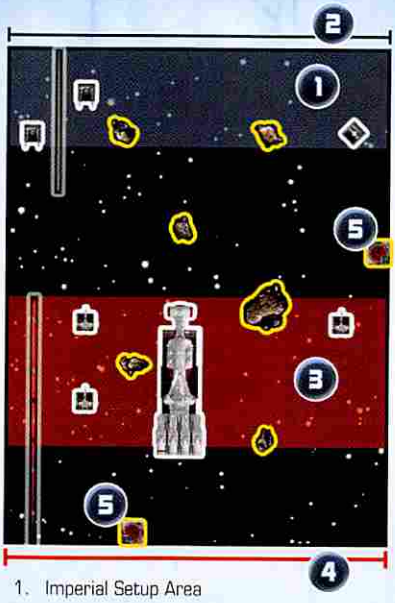

- **Unstable Engines:** When the CR90 is dealt a faceup Damage card, the Rebel player removes one energy token from the hyperdrive card.

OBJECTIVES

Rebel Victory: The hyperdrive card has six hyperdrive tokens. Alternatively, destroy all Imperial ships.

Imperial Victory: Cripple the CR90 section whose Ship card has the hyperdrive card near it.

Mission T3B Setup Example

1. Imperial Setup Area
2. Imperial Edge
3. Rebel Setup Area
4. Rebel Edge
5. Scope Tokens

Mission T4: Minefield

Having joined forces with the Alliance, the CR90 must navigate an Imperial mining operation to deliver the transmissions and Tibanna gas to the Rebel base.

MISSION SETUP

Rebel: CR90, 100 squad points; the Rebel player may equip the CR90 with one free upgrade for each mission he won.

Imperial: 240 squad points; when the Imperial player builds his squad, he must build four groups of ships. Each group has an allotment of 50–70 squad points for ships and upgrades.

The play area is 3' x 6'.

Charge Token Back

The Imperial player places six asteroids in the Imperial half of the play area. He must place each asteroid beyond Range 1 of each edge and beyond Range 1 of each other asteroid.

Active Charge Token Front

Then, the Imperial player gathers all of the dud charge tokens and two active charge tokens, plus one additional active charge token for each mission he won during the campaign. The Imperial player chooses one of these charge tokens and places it facedown on one asteroid; he continues assigning one charge token facedown to each asteroid until all asteroids have a single charge token.

Dud Charge Token Front

Then, he places six scope tokens in the play area. Each scope token must be flat along a neutral edge and beyond Range 3 of each other scope token.

Scope Token

Then, the Rebel player removes one scope token from the play area for each mission he won during the campaign. Then, he places the CR90 within Range 3–5 of the Rebel edge and beyond Range 2 of both neutral edges. Then he places all of his remaining ships within Range 1–5 of the Rebel edge.

Then, the Imperial player chooses the group of Imperial ships that costs the fewest squad points and places those ships at Range 1 of any scope token.

The player who won the most missions has initiative.

SPECIAL RULES

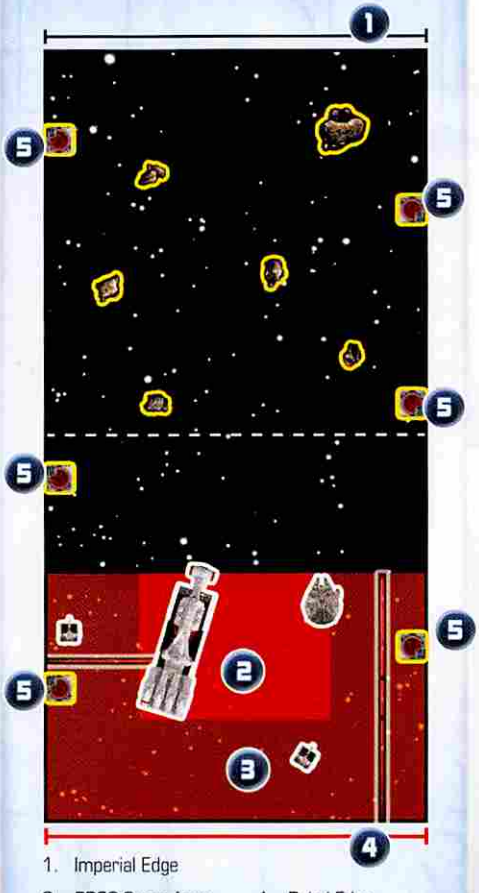

- **Explosive Charges:** At the start of the End phase, the Imperial player may choose and reveal one active charge token. For each ship at Range 1 of that token's asteroid, he rolls three attack dice. That ship suffers all damage (✷) and critical damage (✲) rolled. Then, the Imperial player removes the chosen charge token and its asteroid.
- **Probing the Field:** If a small or large Rebel ship overlaps an asteroid, reveal and remove the charge token assigned to it from the play area. If it is a dud charge token, there is no effect. If it is an active charge token, the asteroid is also removed and the Imperial player rolls three attack dice. The overlapping ship suffers all damage (✷) and critical damage (✲) rolled.
- **Blockade:** At the start of the End phase of Rounds 1, 3, and 5, the Imperial player takes the unplaced group that costs the fewest squad points and places its ships at Range 1 of any scope token. Then he removes that scope token from the play area. If there are no scope tokens remaining when a group must be placed, the Imperial player places the group at Range 1 of the Imperial edge.

OBJECTIVES

Rebel Victory: The CR90 flees off the Imperial edge of the play area.

Imperial Victory: Destroy the CR90.

Faction-Restricted Upgrades

Some of the Upgrade cards in this expansion pack are labeled "*Rebel only.*" Cards with this label **cannot** be fielded in Imperial squads.

Ship-Restricted Upgrades

Some of the Upgrade cards in this expansion pack are labeled "*B-wing only*" or "*A-wing only.*" Cards with this label can only be equipped to B-wing or A-wing ships respectively.

Negative Squad Point Cost

One of the Upgrade cards in this expansion pack displays a negative squad point cost. This card modifies the squad point cost of the ship to which it is equipped.

Mission 9: Jump to Subspace

Hunched over inside an escape pod, a Rebel operative holds a high-ranking Moff at gunpoint. "I know it's cramped in here; quit complaining. I don't have much faith in this thing's life support, so stop using up all the oxygen." The Rebel operative tries the comms again. "Come in Dagger Squadron, do you read me? Dagger Squadron?"

"Copy that. Your last transmission came in garbled, what's your status?"

Holstering his blaster, the operative replies, "I appear to have gotten myself in a bit of a sticky situation. The good news is I escaped the facility with the target, and as far as I can tell, the Imperials don't know our current position."

"Great! Mission accomplished! What's the bad news?"

"We're adrift in a damaged escape pod, the thrusters are failing, and we are rapidly approaching an asteroid belt. You need to send help, and fast. It won't take long for them to realize where their Moff and I went."

"Maintain your position; we are scrambling some rescue craft now. Our engineers should be able to jury-rig something that will give your escape pod enough juice to get out of there."

The cabin lights in the pod flicker. "Don't worry, we're not going anywhere."

After a few minutes of the pair silently drifting through space, the Moff, staring out a viewport stiffens his back, "Ha, see that? Your little rescue is over before it's begun." Almost immediately, green lasers streak by the viewport. The Rebel operative smiling smugly turns to his captive, "I guess we're about find out how disposable an asset you are."

MISSION SETUP

Rebel: 100 squad points; the Rebel player must field at least one A-wing and one B-wing as part of his squad; at least one of those ships must be unique.

Imperial: 75 squad points; the Imperial player cannot field large ships.

The Imperial player places one of the six asteroid tokens into the asteroid setup area (see setup diagram below). Then, the Rebel player chooses one of the remaining asteroid tokens and places it into the setup area. The players continue to alternate until all six tokens have been placed. Asteroids cannot be placed within Range 1 of any other asteroid. The Rebel player then places the escape pod token within Range 2 of the Imperial edge and equidistant from the 2 neutral edges.

Then, starting with the Rebel player, each player takes a turn placing one of his ships in one of the two marked deployment areas as shown on the setup diagram. At least 25 points worth of ships must be deployed in each deployment zone.

The Imperial player has initiative.

SPECIAL RULES

Escape Pod

- **Escape Pod:** The escape pod token does not count as a ship or an obstacle. It cannot perform actions, attack, does not obstruct attacks, etc. It may move through and overlap obstacles without penalty.

- **Jump-starting the Engines:** At the end of the Activation phase, the Rebel player may choose two of his ships that are at Range 1–2 of each other. If he can draw a line between those ships that also passes through the escape pod, he may assign 2 tracking tokens to the escape pod.

Tracking Token

- **Escape Pod Movement:** At the start of the Activation phase, if the escape pod has at least one tracking token, the Rebel player must remove one tracking token and move the escape pod by executing one of three maneuvers: [↑ 2], [↖ 1], or [↗ 1]. The escape pod cannot perform actions.

- **Imperial Reinforcements:** At the end of each End phase, the Imperial player may call for one reinforcement for each Imperial ship with a pilot skill value of "4" or higher that was destroyed that round. For each reinforcement, he takes the lowest-cost Ship card that matches the destroyed ship's type and places it outside the play area. Then he places the matching ship within Range 1–2 of any corner chosen by the **Rebel** player. The Imperial player uses this ship as normal.

OBJECTIVES

Rebel Victory: The escape pod must flee off the Rebel edge.

Imperial Victory: Destroy all Rebel ships.
